

Secure Browser Linux Installation Note

This installation note describes an issue with installing the secure browser on Ubuntu Linux and also provides a workaround.

For complete information about installing the secure browser, refer to the *Secure Browser Installation Manual* on your portal.

Scope

This installation note applies to the following conditions:

- Installing the secure browser version 9.1 on an Ubuntu or Fedora Linux desktop 32-bit or 64-bit.
- The Gnome desktop was installed on top of an Ubuntu or Fedora server distribution. (This installation note does not apply to Ubuntu desktop distributions.)

Description of Issue

Installation of Secure Browser 9.1 on Ubuntu Linux fails.

Workaround

This workaround requires installing a run-time library.

1. Open a terminal.
2. Do one of the following:
 - If you are running Ubuntu, type `sudo apt-get -y install libgtk2.0-0`
 - If you are running Fedora, type `sudo yum install libgtk2.0-0`
3. Re-run the installation script `icon-install.sh`.
